TECHNICAL BUSINESS ANALYSIS | SOLUTION DELIVERY | AI & AUTOMATION

Technical Business Analyst with 9+ years' experience across business analysis, data analytics, solution delivery, process improvement, change coordination, testing and stakeholder engagement. At Auckland Transport, I work at the intersection of operational needs, complex data and software delivery, acting as a subject matter expert while bridging business, technical and vendor teams. Increasingly hands-on in designing and building solutions, using SQL, Python, generative AI and modern web technologies to automate workflows, improve validation and turn operational problems into practical tools. Strongest in roles that require structured problem-solving, technical curiosity, clear communication and ownership from discovery through delivery.

CORE CAPABILITIES

Business & Delivery: Technical business analysis • Requirements & process discovery • Stakeholder facilitation • Solution ownership • Change control • Testing & UAT • Vendor management

Technical & Data: SQL • Python • Excel • Data validation & QA • Azure DevOps • Power BI • GTFS • Systems & integration support

AI & Automation: AI-enabled workflow improvement • Prompt design & iterative refinement • Grounded assistants • AI-assisted software development • Human review & responsible use

PROFESSIONAL EXPERIENCE

Auckland Transport - Business Analyst, Public Transport Data & Customer Information

May 2022 - Present | Auckland, New Zealand

- Subject matter expert for public transport schedule datasets and the IVU scheduling platform, supporting accurate customer-facing data across AT Mobile, Google Maps, operational tools and the enterprise data warehouse.
- Own and coordinate the end-to-end change process for monthly timetable and network releases through Azure DevOps, from small metadata changes to major service changes affecting large parts of the network.
- Bridge operational, technical and vendor stakeholders to clarify requirements, manage delivery risk and resolve issues across complex data and software-dependent processes.
- Act as primary liaison with IVU Traffic Technologies for configuration, upgrades, issue resolution and service performance, translating business needs into actionable technical outcomes.
- Lead technical validation and testing using SQL, Excel and Python across GTFS datasets, and develop test cases and release evidence in Azure DevOps.
- Built AI-assisted Python and SQL workflows to load GTFS datasets into SQL and generate tester-ready outputs, reducing reliance on slower manual preparation; extended the workflow to ingest feeds directly from web links.
- Conduct service reviews, process mapping and business analysis to identify improvement opportunities, support business cases and evaluate future capability options.
- Provide SME input to strategic initiatives including National Ticketing, City Rail Link and Community Connect / OpenLoop, and work with external developers on data publishing services and integrations.
- Contribute to Auckland Transport's Microsoft 365 Copilot AI Community of Practice and apply AI tools to workflow improvement, research, procurement analysis, knowledge access and structured problem-solving.

Retail Performance - Analyst

September 2016 - November 2021 | Auckland, New Zealand

- Delivered analysis across mystery-shopping and market-research programmes, converting operational data into actionable client insights, executive summaries, graphs and concise written recommendations.
- Designed and maintained web-based forms and data-collection structures to improve consistency, reporting quality and downstream analysis.
- Acted as a key remote client liaison, building strong foundations in stakeholder communication, problem clarification and translating analysis for non-technical audiences.

Digital Works - Web Administrator

January 2016 - September 2016 | Auckland, New Zealand

- Produced customer-focused, SEO-aware website content and supported ongoing web administration, analytics and content maintenance for client sites.

SELECTED TECHNICAL & AI PROJECTS

Portfolio: tomjwhite.github.io

Reconcile GTFS Comparator | React, TypeScript, Web Workers

- Designed and built a browser-based workbench for comparing GTFS schedule feeds, separating meaningful timetable and network change from routine identifier and feed-window churn to make release testing faster and more targeted.
- Implemented confidence-scored matching for routes, stops, trip patterns, scheduled trips and shapes, with large-feed processing kept locally in the browser and searchable JSON, CSV and HTML outputs.
- Designed and shipped the application independently using AI-assisted software development throughout architecture, implementation, debugging and iteration, while keeping runtime comparison deterministic and privacy-first.

Copilot-based ITIL Study Agent

- Built a source-grounded assistant using ITIL training material, notes and sample exams to generate practice questions, assess answers and reference supporting source material.

Blake Twigden Artist Website | Next.js, React, TypeScript, Cloudflare

- Designed and shipped the official responsive portfolio site for New Zealand artist Blake Twigden, including accessible gallery interactions, structured content, SEO foundations and a secure contact workflow.

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Computer and Information Sciences - Auckland University of Technology (2015)

Double Major: Software Development and IT Service Science

ITIL Foundation - PeopleCert (2026) • Project Management Essentials (PMBOK) - Lumify (2024) • Data Analyst in Python / SQL - Dataquest (2020)

Ongoing self-directed development in AI, LLM workflows, automation and modern digital delivery.

TOOLS & PLATFORMS

SQL • Python • Excel • Azure DevOps • Power BI • Visio • Microsoft 365 Copilot • ChatGPT • Claude • Gemini • GTFS • IVU.plan • TypeScript / React (project experience)
