

Tom White

TECHNICAL BUSINESS ANALYST | SYSTEMS, DATA & AUTOMATION

Auckland, New Zealand | 021 446 849 | tomjwhite@outlook.com | LinkedIn | Portfolio

PROFILE

I investigate data and system problems and build tools that reduce manual work. At Auckland Transport, I coordinate timetable and network releases, assess how changes affect connected systems, and work with internal teams and technology vendors to resolve issues before they affect customer information. I use SQL, Python and AI-assisted development to improve data preparation and testing.

CORE CAPABILITIES

Systems analysis: Data flows and dependencies, downstream impacts, technical requirements, issue investigation and vendor assessment.

Change and improvement: Process mapping, automation, integration support, release coordination, data validation, test cases, UAT and vendor liaison.

Tools: SQL, Python, Excel, Power BI, GTFS, IVU.plan, Azure DevOps and Visio; Microsoft 365 Copilot, ChatGPT, Claude and Codex. TypeScript / React (project experience).

PROFESSIONAL EXPERIENCE

Auckland Transport | Business Analyst

Public Transport Data & Customer Information | May 2022 - Present | Auckland

Selected contributions

- Served as the team's primary SME for GTFS schedule data during City Rail Link go-live preparations, validating timetable data and resolving issues to support accurate customer information at opening.
- Improved the existing ETL process by automating GTFS ingestion into SQL for testing, replacing an Excel macro and import-wizard workflow that took about an hour with an unattended Python script. Later added loading from web links.
- Served as an evaluator in RFI and RFP processes, helping define requirements, assessing vendor proposals against them and documenting findings to inform procurement decisions.

Responsibilities

- Drive and coordinate monthly timetable and network releases through Azure DevOps, bringing together requirements, testing, vendor work and release checks for changes ranging from metadata corrections to major service changes.
- Act as subject matter expert for public transport schedule data and the IVU scheduling platform. Assess how schedule changes affect downstream data used by AT Mobile, Google Maps, operational tools and the enterprise data warehouse.
- Identify dependencies between scheduling, data-publishing and customer information systems, bringing operations, product, data and software teams together to address release risks. Work with external developers on publishing services and integrations.
- Serve as the primary contact for IVU Traffic Technologies on configuration, upgrades, issues and service performance, explaining operational requirements and working with the vendor to resolve problems.
- Lead data validation using SQL, Excel and Python. Define expected behaviour and test cases, coordinate UAT, and investigate data and software issues before release.
- Map processes, review services and support business cases for future capabilities. Provide schedule-data expertise to National Ticketing, City Rail Link and Community Connect / OpenLoop.

SELECTED PROJECTS

Reconcile GTFS Comparator

Independent product

- Designed and built a browser-based tool to compare public transport timetable feeds (GTFS). It separates meaningful timetable and network changes from routine changes to identifiers and feed dates that make raw file comparisons difficult to use.
- Defined comparison rules, user workflows and before-and-after evidence for routes, stops, trips and route shapes. Chose browser processing to keep source data local, with reports and exports for further review.
- Set acceptance criteria and tested comparisons against realistic timetable scenarios, using the results to refine the product. Used AI-assisted development to implement, iterate on and deploy the application.

Blake Twigden Artist Website

- Built and launched a six-page portfolio website for a New Zealand artist. Defined the content structure and implemented accessible galleries, mobile layouts, search engine optimisation and a secure contact form.

Copilot ITIL Study Agent

- Built an AI assistant using ITIL training material, notes and sample exams to generate practice questions, assess answers and refer back to the supporting material. Others also used it for ITIL study.

EARLIER EXPERIENCE

Retail Performance | Analyst

September 2016 - November 2021 | Auckland

- Analysed mystery-shopping and market-research data, producing reports, charts and recommendations that clients could use to make decisions.
- Designed and maintained web forms and data-collection structures to improve consistency and reporting quality.
- Worked directly with remote clients to clarify questions, explain findings and recommend practical actions.

Digital Works | Web Administrator

January 2016 - September 2016 | Auckland

- Wrote customer-focused content with search engine optimisation in mind, and supported website administration, analytics and content maintenance for clients.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Bachelor of Computer and Information Sciences

Auckland University of Technology | 2015

Double major in Software Development and IT Service Science

ITIL 4 Foundation | PeopleCert | 2026

Project Management Essentials (PMBOK) | Lumify | 2024

Data Analyst in Python / SQL | Dataquest | 2020
